

## Profile

Energetic, practical professional with 4+ years of experience Web Developer and QA Analyst in manual and automated testing. I have a strong knowledge of all stages of software development and strong knowledge of testing methodologies, tools, and processes. Seeking a challenging position in a dynamic organization where I can contribute to delivering high-quality software solutions.

## Skills

- Manual and automated testing of websites and APIs
- Dedication to using quality standards and producing high-quality software
- Intrinsic drive and a proactive attitude toward assisting others
- Working knowledge of testing ideas and procedures
- Bachelor's degree in software engineering
- Ability to address complex challenges through critical and inquisitive thought
- Ability to extensively test features and apps with great attention to detail
- Capability to work alone or with others to solve problems
- Strong communication in both writing and speaking, including active listening in Farsi and English

## TECHNICAL SKILLS

- Operating Systems: Windows, MAC OS, Linux
- API: Postman
- Bug Tracking: Jira, Help
- CI servers: GIT
- Programing language: C#, Java, React.js
- Web Related: HTML, CSS, JavaScript
- Web Testing Tools: XPath, Developer Toolbar, Android studio, Selenium
- Mobile: Android, iOS
- Databases: MySQL, MongoDB

## Professional Experiences

### Web Developer Freelance – Various Employers – Vancouver, BC

Sep 2018 – Present

- Overall web design and implementation software for different projects such as Dice Game, New Test, Faith Fire, and Food Order

### Quality Assurance Analyst - Manage Petro - North Vancouver, BC

Sep 2020 – Mar 2023

- Collaborated with the development team and the rest of the QA team to improve software quality
- Designed testing plans and strategies for UI, API, load, performance, integration, and regression testing for our web and client/server products.
- Oversaw all aspects of quality assurance including established metrics, applied industry best practices, and developed new tools and processes to ensure quality goals are met

- Analyzed, recommended, and configured tools to be used for quality assurance
- Wrote and maintained automated test suites for front-end and back-end components using JMeter, Test Complete, Selenium, SQL, Java, JS, Git, Linux, or Windows Batch file.
- Installed and configured test environments
- Developed and maintained existing scripts to refresh testing environments.
- Collected metrics to measure the quality of our products over time

#### **Web Developer- Faith Fire - Surrey, BC**

**Feb 2019 – Aug 2020**

- Participated in code reviews, design reviews, and coding with a lot of innovation
- Proficient in web technologies: HTML, CSS, client-server architecture, API
- Shared insights with the team and found tailored solutions for every problem
- Assist in resolving any defect escalations and locating ongoing quality control problems.

### **Certifications**

**Associate Certificate - British Columbia Institute of Technology (BCIT) - Burnaby, BC**

**2019**

### **Education**

**Bachelor's degree in Software Engineering, University of Tabriz, Tabriz, Iran**

**2014**
